Our Tie& Dye preparation machine ties the fabric in rope form with up to four yarn ends . After this process the fabric can be dyed on normal dyeing machines like winches or High Temperature Rope Dyeing machines. Also beam dyeing machines are suitable .

The wet fabric comes out of the machine and has to be opened for the drying process . So the yarn has to be taken off again , by hand or by machine .

We have invented a machine to take off the yarn automatically – the Unwinder UW

This machine takes off one , two or four yarn ends . The normal winding structure is with one or two yarn ends in criss / cross direction (2 x Z and 2 x S winding direction). The unwinding machine winds the yarn on bobbins , which can easily be changed . Regular and irregular winded ropes can be treated on this machine . The winding structure is detected and the unwinding speed of the two units are controlled automatically.
